

Doğukan Berat KARATAŞ

Software Engineer

I build full-stack web applications with Angular, NestJS, and Laravel. I take an active role across the entire process, from UI design and API development to database management, server setup, and deployment. Since 2020, I have been working at Z Software on products with real user bases such as Cubicl and Monkedo. In my spare time, I bring my own ideas to life through projects like Oto-vs, Pazaryeribul, and Kolay Pazar.

Education

University

Hacettepe University Ankara, Turkey / From Sept. 2015 to July 2020
Computer Engineering Student (100% English)
GPA: 3.00

High School

Çağrıbey Anatolian School Ankara, Turkey / From Sept. 2011 to Jun. 2015
GPA: 88,54

Work experience

Fullstack Web Developer

Z Yazılım Ltd. Şti. ODTÜ Teknokent, Kuluçka 1 Binası / Since July 2020
I work as a full-stack developer on products with active user bases, such as Cubicl and Monkedo. I develop end-to-end web applications, taking an active role in UI (frontend) and API (backend) development, database management, and server deployment and maintenance processes.

Internship Experience

Intern

Innova ODTÜ Teknokent, Ankara, Turkey / From Aug. 2019 to Sept. 2019
I took part in the development of a System Management web application designed for Vodafone. I actively contributed to the project using Angular for the frontend architecture and Spring Boot for the backend.

Intern

OBSS İstanbul Teknopark, İstanbul, Turkey / From July 2019 to Aug. 2019
In this internship, I worked on Java technologies. It was a very useful internship as I wanted to improve myself in this field. In addition to Java SE, I had the opportunity to work with Java EE as well as the Spring Framework and develop projects.

My Projects

Cubicl Task Management Program (Angular 17 - Laravel 9 - MongoDB)

I work as a full-stack developer on the Cubicl platform, which simplifies project and task management for users; cubicl.io. In addition to developing new features based on user feedback, I manage server updates and maintenance for our clients using the on-premise version.

Monkedo No-code Automation Platform (Angular 16 - NestJS 10 - MongoDB)

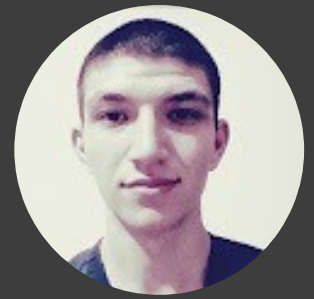

I have been involved from the very beginning in the development of Monkedo, a no-code automation platform that allows users to create integrations between various applications without writing any code; monkedo.com. I actively manage processes in both the UI and server architecture of the system.

Pazaryeribul.com (Angular 21 - NestJS 11 - MongoDB)

A web application I designed entirely on my own to provide modern access to local street markets (bazaars) and connect local producers with consumers; pazaryeribul.com. Thanks to its smart filtering features, user feedback mechanism, and innovative interface, market location, day, and address information can be accessed quickly.

Kolaypazar.store (Angular 21 - NestJS 11 - MongoDB)

A smart tracking platform that aggregates weekly promotional products and discount catalogs from supermarkets into a single hub; kolay-pazar.store. Operating via web scraping, the system presents current supermarket discounts to users based on location. Future plans include adding an AI-supported barcode reading integration to the project.

Technologies I Use

Angular 2+ (TypeScript)

NestJS (TypeScript)

Laravel (PHP)

MongoDB

▪ mongoose

Git

▪ GitHub
▪ GitLab

Figma

Docker

Languages

English

▪ Research - Advance
▪ Speak - intermediate

Korean

Hobby

Interests

+ I like to draw whenever I can find time.

+ I like dealing with math problems.

My Projects

[Oto-vs.com](#) (Angular 21 - NestJS 11 - MongoDB)

An application I developed to track new vehicle list prices and view price history; [oto-vs.com](#). You can monitor current prices by brand, model, and trim level, examine price increase or discount periods on a chart, and compare vehicle prices side-by-side.

[HUBBM Notes Sharing](#) (Angular 21)

I used to share the notes I took during my student years on a blog site I had set up. I wanted to move this content to a custom domain name and created a new site with a fresh design; [hubbm-not-paylasim.dev](#).

[NLP-Based Virtual Assistant for Project Management](#) (Angular 8 - Flask (Python) - SpaCy (Python))

A virtual assistant we developed within the Cubicl project to automate users' daily routine tasks. Users can send written requests to the assistant, which understands the intent and performs the required actions.

[Algorithm-Based Production Planning Web App for Machining Industry](#) Angular 8 - NestJS 8 - MongoDB)

This project automates the process in a machining factory, from inventory tracking and defining production stages to determining required workers and machines, and creating optimal production plans.

[Pet Adoption Project](#) (React - Spring Boot - MySQL - Hibernate)

A platform we developed with two friends as our graduation project. We aimed to bring users and shelters together under one roof.

[Pet Adoption - Mobile Application Project](#) (React Native(Expo) - Spring Boot - MySQL - Hibernate)

The mobile app for our graduation project, built to provide a better experience for users and shelters using our website.

[E-Commerce Site Project](#) (React - Spring Boot - Postgresql - Hibernate)

In my third year at university, our group of five developed this project with the idea of building an e-commerce site. It was my first large web project where everyone had different roles and we exchanged ideas as a team.

Competitions

OBSS CodeMaster: In the third year of the University, it is a coding competition that I attend as an individual. It was the only question based on the algorithm. The results were not announced one by one, but I couldn't get to the top 5.

Voluntary experience

Translator

[All Kinds of Companies](#) Ankara, Turkey / Since Jan. 2017

I work as a volunteer translator on both Youtube and other platforms.

Languages

English

- Writing & Reading - Upper Intermediate
- Speaking - Intermediate

Korean

- I am in the initial stage, but I continue to learn.

Interests

+ I like to draw pictures when I have time.

+ I like to deal with math problems.
